(ETX and Multiviewer)

Georgian Public Broadcaster (GPB) selects Etere to manage the complete broadcasting workflow of three TV channels. Etere streamlines workflows and simplifies complex tasks across the media lifecycle. With Etere's future-ready technology and continuous innovations, GPB will be equipped with software-defined solutions that delivers high-levels of operational efficiency and resilience.

Etere is tasked with the implementation of a complete workflow solution to manage GPB's channels. The implementation includes a customised interface with the option to select either a Georgian language or English language GUI. With one united workflow, Etere empowers GPB with scalable modular solutions that work in tandem with one another for a seamless 24/7 operations. The workflow covers the multiple functionalities of **Playout Automation, Media Asset Management, Scheduling, Ingest and Resource Management**.

As an integral part of the system, **Etere Media Asset Management** offers tight integration with all Etere modules, providing total control and visibility of processes in the organisation and paving the way for an enhanced operational efficiency. It provides a centralised management of digital content and workflow orchestration across the organisation. With Etere MAM, complex tasks are simplified and the real-time content search, retrieval, browsing and content editing on the web interface enables the GPB production team to drive their workflows no matter where they are. One important feature of Etere MAM is the agenda that allows users to create, assign, approve, accept and preview tasks. The progressive status of each task can be viewed in real-time for an effective resource planning across departments. It also integrates with Microsoft outlook calendar for an easy management.

On top of that, Etere's Channel-in-a-Box software, **Etere ETX**, is a turnkey solution that integrates all the software capabilities GPB needs to bring its channels on-air including scheduling, ingest, storage, file management, monitoring, playout, multiviewer, subtitle management, CG and graphics management. The ETX platform provides multi-resolution support and enables GPB to manage SD, HD and 4K formats. The system features an open interface that allows the production team to run SDI/IP/NDI inputs and outputs. ETX integrates with **Etere ETX-M Multiviewer** to allow multi-channel monitoring on a single screen. It includes an automatic loudness control that monitors and corrects transmission volume errors.

Etere invests in research and development to leverage smart technologies and innovative system architectures. It delivers software solutions that enable users to work better and faster. The synchronization of Etere solutions ensures complete control, simplified operations as well as a fast and accurate information exchange between multiple departments in the organisation. Etere delivers solutions that help GPB to meet the dynamic demands of its content delivery and broadcast. Etere's versatile Windows and web platforms provides GPB with the agility to run workflows on multiple devices including laptop, tablets and PC, from any location with an internet connection. Etere's distributed system architecture ensures a fault-resilient performance even in fast-paced operations. Above all, Etere is a system that is ready to adapt to the needs of today and tomorrow.
